Solution(1):-

- 1- The mass on moon = the mass on earth = 30 kg
- 2- The weight on earth = mass (kg) × 10
 $= 30 \times 10 = 300 \text{ newton}$
- 3- The weight on moon = the weight on earth $\times \frac{1}{6}$
 $= 300 \times \frac{1}{6} = 50 \text{ newton}$

Solution(2):-

Weight on moon = $\frac{1}{6} \times$ weight on earth
 $= \frac{1}{6} \times 600 = 100 \text{ Newton}$

Solution(3):-

Weight = mass (kg) × 10
 $\text{Mass} = \frac{\text{weight}}{10} = \frac{20}{10} = 2 \text{ kg}$

Solution(4):-

Mass (gm) = 200 gm
 $\text{Mass (kg)} = \frac{200}{1000} = 0.2 \text{ kg}$
 Weight on earth = mass (kg) × 10
 $= 0.2 \times 10 = 2 \text{ newton}$
 Weight on moon = weight on earth $\times \frac{1}{6}$
 $= 2 \times \frac{1}{6} = 0.33 \text{ newton}$

Give reason for:-

- 1- Because as mass increases the weight increases.
- 2- Because by increasing object's mass it's more difficult to change its speed.
- 3- Because earth has greater mass & gravitational force than moon.
- 4- Because the gravity force decreases as the body moves away from the earth so its weight decreases.
- 5- Because the mass of moon is less than that of earth & as mass of the planet decreases its gravitational force decreases.
- 6- Because the air that between the two sheets of glass is a bad conductor of heat, which prevents leakage of heat.
- 7- Because aluminium is good conductor of heat.
- 8- To keep the body warm as they are bad conductor of heat.
- 9- Because by heat the railways expand & twist causing train accidents.
- 10- Because a- mercury doesn't stick to the capillary tube.
 b- mercury is a good conductor of heat.
 C- mercury has regular expanding.
 d- mercury remain liquid between (-39°C) and (357°C) and gives us wide range for temperature measurement.
 e- mercury is a silver liquid metal and can be seen easily
- 11- To avoid vibration of the balance and get the reading of mass more accurate.
- 12- Because the gravitational force of the earth attracts the hanged body downward, that causes the expansion of the wire of spring scale.
- 13- because, as the mass of planet changes, the gravity changes, so the weight of the object on it changes.

- 14- because the copper allows heat to flow through it faster than the aluminum.
- 15- To prevent fast return back of mercury to the mercury bulb and to record the temperature easily.
- 16- Because the amount of oxygen which is consumed during respiration process equals to its amount which is produced by plants during photosynthesis process.
- 17- Because it forms the ozone layer that protects the earth from harmful rays of the sun.
- 18- Because the oxygen gas has a neutral effect on red or blue litmus paper.
- 19- Because the manganese dioxide is a catalyst, so its amount and properties don't change during the reaction.
- 20- Because oxygen is heavier than the air, so it allows us to breathe on mountains.
- 21- Because oxygen scarcely dissolves in water.
- 22- To sterilize it from the microbes before using it.
- 23- To force the mercury back to the mercury bulb and measure the temperature accurately.
- 24- Because by touching, we know if this body hot or cold only, but we can't measure the temperature of this body.
- 25- Because mercury is still liquid from (-39 until 357 °C).
- 26- Because it has neutral effect on litmus paper.
- 27- To protect them from rusting that causes damage.
- 28- Because it reacts (combines) with O₂ gas forming iron oxide.
- 29- Because O₂ gas decreases when we rise above the earth's surface.
- 30- Because its temperature reaches 3500°C that is enough to cut metals.

Science

- 31- Because it protects the earth's surface from harmful radiation.
- 32- Because: 1. It protects the earth by absorbing ultraviolet radiation comes from space.
 2. It adjusts the temperature of the earth.
- 33- Because CO₂ gas turns the clear lime water into turbid by forming calcium carbonate (white precipitate) that doesn't dissolve in water.
- 34- Because Co₂ gas doesn't burn & doesn't help in burning.
- 35- Because yeast fermentation produces CO₂ gas that expands by heating making the bread spongy (porous) & tasty.
- 36- Due to the removal of forests.
 - The burning of massive amount of fuel in industry & means of transportation engines.
- 37- Because green plants take CO₂ gas to make photosynthesis process to make their food & nutrients for all living organisms.
- 38- Because the increase of CO₂ gas leads to: rising the earth's temperature (global warming).
 - Suffocation of living organisms.
- 39- Because it doesn't contain any nutrients except sugar & it contains large amount of CO₂ gas.
- 40- Because man gets suffocated if he breathes CO₂ gas which is colorless , tasteless & odorless.
- 41- Because its volume doesn't change by changing temperature.
- 42- Because the air contains 78 % of N₂ gas from its volume
- 43- To absorb CO₂ gas from the air.
- 44- To remove O₂, as copper combines with Oxygen in the air.
- 45- Because nitrogen is the main component of proteins that build up tissues of living organisms.
- 46- Because nitrogen is all involuntary process as:-inactive element that doesn't help in burning.
